

LANGWORTHY

NEW BUILD, PRIVATE DEVELOPMENT.

This famous RIBA award winning project 'chimney pot park' in Manchester involved the construction of 359 terraced houses. SIP Build working with Urban Splash designed a solution to accommodate a space saving roof which contributed to additional living area being achieved.

Using a 150mm SIP panel with pre fabricated false chimney stacks, the houses were able to utilise the roof space as kitchens or lounge areas with the chimney stack acting as a lightwell.

SIP Build carried out the installation of all roof solutions, floors and internal walls to this project over a 2 year period.
